DETAILED ACTION

1. Claim(s) 1-22 has/have been presented for examination based on amendment filed on 10/02/2009.
2. Claim(s) 1, 4 and 22 is/are amended.
3. Claim rejection under 35 USC § 101 is withdrawn in view of applicant's amendment to claim 1, 4 and 22.
4. Claim rejection under 35 USC § 112 is withdrawn in view of applicant's arguments and specification [0098]-[0101] & Fig.10. For claim 22 the Means for language seems to have support in the operations which are performed by a specific computer programmed to perform the operations as disclosed in Fig.10.
5. Claim(s) 1-22 are now allowable.

Allowable Subject Matter

6. The following is an examiner's statement of reasons for allowance: claims 1-22 are considered allowable since when reading the claims in light of the specification, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims, specifically *extending at least one of the ancestor configuration model family spaces of the conflicting configuration models so that the ancestor configuration model family spaces of the first and second conflicting configuration models represent the same ancestor configuration model family space; removing from the child configuration model family space any configuration space extended in the ancestor of the child configuration family space; and combining the first and second configuration models into a single,*

consolidated model that maintains a non-cyclic chain of dependencies among families and features of families for use in answering configuration questions related to the product as disclosed in independent claims 1, 3, 4 and 22 of the instant application (as defined specification [0068]-[0105] and example as presented in [106]-[0144] of the instant application).

7. A practical application for the invention is disclosed on page 1 under field of invention.
8. The Prior art of reference **Lichentenberg** (US PGPUB 2002/0165701) discloses
The preferred embodiment of the present invention, Virtual Tabulation, is a method for keeping track of inter-dependencies among a large number of parts, to allow for the construction of an efficient and exact configuration program. Such a program allows interactive configuration over networks (e.g., the Internet). Another aspect of the invention, called Smart Search, allows a set of inter-dependencies among parts to be computed from a product database. However as argued Lichentenberg does not teach combining two product configurations, merely navigation between one product configuration and combining of sub configuration (Lichentenberg: [0138]-[0146].
9. The Prior art of reference, NPL, **Kramer** fails to teach that the DAGs are for consolidating multiple configuration models and limits the teaching to consolidating multiple control paths in a non-cyclic way as in a DAG.
10. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
